HALOKAZI

Web-Based CV Builder, Career and Job Opportunity Platform

STAGE 1: PROJECT INITIATION & IDEA DEFINITION

Document Information

Item	Details
Project Name	Halokazi
Document Title	Project Initiation & Idea Definition
SDLC Stage	Stage 1 of 14 — Hybrid SDLC
Methodology	Waterfall + Agile Scrum
Document Version	1.0
Status	Final Draft — Pending Review & Sign-off
Prepared by	Raymond Avitus Gingi
VTZ code	VTZ374007
Email	gingira@halotel.co.tz
Date	August 24, 2026

1. PROJECT TITLE

Halokazi —Web-Based CV Builder, Career and Job Opportunity Platform

Project Type: Web-Based Career and Recruitment Platform

Primary Platform: Web Application

Mobile Support: Responsive Web Application

Primary Users:

- Job Seekers
- Employers and Recruiters
- System Administrators

2. PROJECT BACKGROUND

Finding employment opportunities and preparing professional job-application documents such as curriculum vitae are important activities for job seekers. However, these activities are often performed using different platforms, websites and tools.

A job seeker may use one platform to search for vacancies, another application to prepare a curriculum vitae, company websites to identify opportunities, email to submit applications, and social-media platforms to receive information about newly advertised positions.

This fragmented process makes job searching and career management difficult. Job seekers may miss relevant employment opportunities, repeatedly enter the same professional information on different platforms, prepare poorly structured CVs or struggle to keep track of jobs for which they have already applied.

Employers and recruiters also require efficient mechanisms for advertising vacancies, receiving applications, reviewing candidates and managing the recruitment process.

The **Halokazi Project** is therefore proposed as a centralized digital career and recruitment platform that brings together professional-profile management, CV creation, job discovery, job applications, application tracking and job notifications within a single system. The platform will allow job seekers to maintain professional profiles, create CVs, discover employment opportunities and monitor applications. Employers and recruiters will be provided with tools for publishing vacancies and managing applicants, while system administrators will manage and monitor the overall platform.

3. PROBLEM STATEMENT

Job seekers currently face several challenges when searching and applying for employment opportunities.

Job vacancies are distributed across different recruitment websites, company career pages, social-media platforms and other communication channels. As a result, candidates must continuously search multiple sources to identify suitable opportunities.

Some job seekers also lack access to simple and accessible tools for preparing professional and well-structured CVs. They may prepare CVs manually, use inconsistent formats or repeatedly recreate the same career information when applying for different positions.

Another challenge is the lack of timely notifications when new vacancies matching a candidate's qualifications, skills, experience, location or career interests become available.

Managing multiple job applications can also become difficult. Candidates may not have a centralized mechanism for recording the positions they have applied for and monitoring the progress of those applications.

Employers experience related challenges in publishing vacancies, organizing applications, reviewing candidate information and updating recruitment progress.

There is therefore a need for an integrated digital platform that centralizes CV preparation, professional-profile management, job discovery, job applications, application tracking and recruitment management.

4. PROPOSED SOLUTION

The proposed solution is to design and develop **Halokazi**, a centralized web-based career and recruitment platform. Halokazi will provide job seekers with tools for creating and maintaining professional profiles containing information such as education, skills, work experience, certifications and career interests.

The platform will provide a CV builder that enables users to generate professional CVs using predefined templates. Candidates will be able to preview, edit, manage and download their CVs.

Job seekers will be able to search, filter, view and save available vacancies. They will also be able to submit applications and monitor their application history and status from a centralized dashboard.

Users will be able to configure employment preferences and receive notifications when relevant opportunities become available.
Employers and recruiters will have a dedicated portal through which they can create organizational profiles, publish vacancies and manage applicants.

System administrators will use an administration portal to manage users, employers, vacancies, CV templates, platform content and other system activities.

The platform will be implemented as a responsive web application so that it can be accessed effectively from desktop computers, laptops, tablets and mobile devices.

5. PROJECT VISION

To become a trusted and accessible digital career platform that connects job seekers with relevant employment opportunities while simplifying professional career preparation and recruitment.

6. PROJECT MISSION

To provide a secure, user-friendly and centralized digital platform that enables individuals to create professional CVs, discover relevant employment opportunities, manage job applications and receive career notifications while providing employers with efficient recruitment-management tools.

7. MAIN OBJECTIVE

To design and develop a centralized web-based career and recruitment platform that enables job seekers to create professional profiles and CVs, discover employment opportunities, submit and track job applications and receive relevant job notifications while enabling employers to advertise vacancies and manage applicants.

8. SPECIFIC OBJECTIVES

The project aims to:

i. Provide secure registration, authentication and role-based access for job seekers, employers and system administrators.
ii. Enable job seekers to create and maintain professional career profiles containing personal information, education, work experience, skills, certifications, languages and career interests.
iii. Provide a CV builder that enables job seekers to create, edit, preview and download professional CVs using predefined templates.
iv. Provide a centralized mechanism through which users can discover, search, filter, view and save available employment opportunities.
v. Enable job seekers to submit job applications and monitor their application history and current application status.
vi. Enable users to configure career and job preferences and receive notifications when relevant employment opportunities become available.
vii. Enable employers and recruiters to create organizational profiles, publish and manage vacancies and review job applications.
viii. Provide system administrators with tools for managing users, employers, vacancies, CV templates, platform content and major system activities.
ix. Ensure that the system is responsive and accessible through modern desktop and mobile web browsers.
x. Protect user information and documents through appropriate authentication, authorization, validation, privacy and security mechanisms.

9. TARGET USERS AND STAKEHOLDERS

The Halokazi platform will serve several categories of users and stakeholders.

9.1 Job Seekers

Job seekers will be the primary users of the platform. They will use Halokazi to manage their professional career information, prepare CVs, discover relevant employment opportunities, submit applications and monitor their job-search activities. Typical job seekers may include:

- University and college graduates
- Experienced professionals
- Individuals seeking new employment opportunities
- Individuals seeking career advancement
- Individuals preparing professional CVs
- Candidates actively applying for advertised positions

9.2 Employers and Recruiters

Employers and recruiters will use Halokazi to advertise employment opportunities and manage job applicants. They may include:

- Private companies
- Public organizations
- Recruitment agencies
- Human-resource departments
- Authorized company recruiters

The employer portal will provide the tools required to maintain company information, publish vacancies and manage recruitment activities.

9.3 System Administrators and Platform Management

System administrators will be responsible for managing, maintaining and monitoring the platform. Their responsibilities may include:

- User management
- Employer-account management
- Job-advertisement management
- CV-template management
- Content management
- Reported-content management
- Platform monitoring
- System configuration
- Administrative reporting

Platform owners or authorized management personnel may also use administrative reports and analytics to monitor system performance and support operational and strategic decision-making.

9.4 External Systems and Service Providers

Halokazi may depend on approved external systems and service providers for specific technical functions. These may include:

- SMS services
- Cloud file-storage services
- Authentication services
- Hosting infrastructure
- Other approved third-party APIs

These systems are not direct users of Halokazi but may provide supporting services required by the platform.

10. HIGH-LEVEL PROJECT SCOPE

10.1 In Scope

The initial version of Halokazi will include the following capabilities.

A	**Account and Access Management** • User registration • Login and logout • Password recovery • Role-based access control • User-account management • Profile management	**B**	**Candidate Profile Management** Candidates will be able to maintain: • Personal information • Education information • Work experience • Skills • Certifications • Languages • Career interests • Employment preferences
C	**CV Management** The platform will provide: • CV creation • Predefined CV templates • CV editing	**D**	**Job Management** Authorized employers will be able to: • Create vacancies • Edit vacancies • Publish vacancies

	• CV preview • CV download • Storage of CV information • Multiple CV versions where applicable		• Close vacancies • Manage job categories • Manage vacancy information
E	**Job Search and Discovery** Job seekers will be able to: • View available vacancies • Search for jobs • Filter vacancies • View job details • Save interesting vacancies Search and filtering may use information such as: Job title, Location, Category, Employment type, Experience level	F	**Job Application Management** The platform will provide: • Job-application submission • CV selection during application • Application history • Application-status tracking • Applicant management for employers
G	**Job Alerts and Notifications** The system will allow users to: • Define job preferences • Configure job alerts • Receive in-system notifications • Receive supported external notifications where applicable	H	**Employer and Recruitment Portal** Employers will be able to: • Maintain company profiles • Manage vacancies • Receive applications • Review applicants • Review candidate profiles and CVs • Update application statuses
I	**Administration Portal** Administrators will be able to: • Manage users • Manage employer accounts • Manage job advertisements	J	**Reporting and Analytics** The system will provide basic reports and statistics concerning: • Platform users • Employers

	• Manage CV templates • Manage platform content • Monitor platform activities • Manage reported or inappropriate content • View administrative reports • Manage relevant system configurations		• Vacancies • Job applications • CV usage • Platform activity

11. OUT OF SCOPE FOR THE INITIAL RELEASE

To control the size, cost and complexity of the first release, certain capabilities will not be included in Version 1. The following features are considered outside the initial project scope:

- Native Android application
- Native iOS application
- Advanced AI-based CV generation
- AI-based CV scoring
- AI-assisted candidate screening
- Automated AI interviewing
- Video interviewing
- Psychometric assessment
- Advanced technical assessment
- Advanced candidate-job matching
- Integration with multiple external recruitment platforms
- Advanced subscription and monetization capabilities

These features may be considered in future versions depending on business requirements, available resources and user demand.

12. CORE SYSTEM MODULES

Halokazi will be logically organized into the following major modules.

Module 1: Authentication and Account Management

Handles registration, login, password recovery, account management and user authorization.

Module 2: Candidate Profile Management

Manages candidate education, skills, work experience, certifications, languages, career interests and employment preferences.

Module 3: CV Builder and CV Management

Allows candidates to create, customize, edit, preview, save and download professional CVs.

Module 4: Job Management

Allows authorized employers to create, publish, edit, close and manage job vacancies.

Module 5: Job Search and Discovery

Allows candidates to search, filter, view and save relevant employment opportunities.

Module 6: Job Application Management

Handles job-application submission, application records and application-status management.

Module 7: Job Alerts and Notifications

Uses candidate preferences and available vacancies to generate relevant job alerts and notifications.

Module 8: Employer and Recruitment Management

Provides employers and recruiters with tools for managing organizational profiles, vacancies and job applicants.

Module 9: Administration and System Management

Provides administrators with centralized tools for managing platform resources, users, employers, content and system activities.

Module 10: Reporting and Analytics

Provides relevant statistics and reports concerning users, employers, vacancies, applications, CVs and overall platform usage.

13. EXPECTED BENEFITS

13.1 Benefits to Job Seekers

Halokazi is expected to:

- Simplify professional CV creation.
- Centralize professional career information.
- Reduce the need to use multiple platforms when searching for jobs.
- Improve access to employment opportunities.

- Provide timely information about relevant vacancies.
- Centralize job-application history.
- Make it easier to monitor application progress.
- Improve organization of job-search activities.
- Provide reusable professional information for multiple job applications.

13.2 Benefits to Employers and Recruiters

The platform is expected to:

- Provide a centralized mechanism for publishing job vacancies.
- Simplify the process of receiving job applications.
- Improve applicant organization and management.
- Provide efficient access to candidate information and CVs.
- Simplify application-status management.
- Reduce manual recruitment administration.
- Improve communication between employers and applicants.

13.3 Benefits to Platform Management

The platform is expected to:

- Centralize career and recruitment activities.
- Provide useful platform-usage statistics.
- Improve monitoring of users, vacancies and recruitment activity.
- Create opportunities for future premium services.
- Establish a technical foundation for future recruitment integrations.
- Support the gradual introduction of advanced career and recruitment technologies.

14. PROJECT ASSUMPTIONS

The project is based on the following initial assumptions:

1. Users will have access to an internet connection.
2. Users will have access to a valid mobile phone number.
3. Users will have access to a modern web browser.
4. Employers will provide accurate and legitimate organizational and vacancy information.

5. Candidates will be responsible for maintaining accurate professional and career information.
6. The initial system will operate primarily as a responsive web application.
7. Required external service providers will provide reliable and accessible APIs or services.
8. Appropriate hosting and database infrastructure will be available.
9. Authorized administrators will be available to monitor system activities and manage inappropriate or fraudulent content.
10. Users will comply with the platform's acceptable-use requirements and policies.

15. PROJECT CONSTRAINTS AND EXTERNAL DEPENDENCIES

The development and operation of Halokazi may be affected by several constraints.

15.1 Time

The system must be designed, developed, tested and delivered within the available project schedule. The available time may limit the number of advanced capabilities that can be included in the initial release.

15.2 Budget

The project may incur operational costs associated with:

- Hosting
- Domain registration
- Database infrastructure
- File storage
- SMS services
- Security services

Available financial resources may therefore affect implementation decisions.

15.3 Technical Resources

Implementation may be affected by:

- Available server resources
- Development tools
- Developer skills
- Database capacity

- Hosting limitations
- Third-party-service limitations

15.4 Data Privacy and Security

Halokazi will process personal and professional information, including CVs and employment-related information. Appropriate privacy, authentication, authorization, data-protection and system-security mechanisms must therefore be implemented.

15.5 Scalability

The architecture should support future growth in:

- Users
- Employers
- CVs
- Vacancies
- Job applications
- Notifications
- Stored documents

Growth should be supported without requiring a complete redesign of the platform.

15.6 External Dependencies

Some functions may depend on external services such as:

- SMS gateways
- Cloud file storage
- Authentication services
- Hosting providers
- Other approved APIs

Failure, delay, policy changes or service limitations affecting these providers may affect certain Halokazi functions.

16. INITIAL PROJECT RISKS

Several risks should be considered during the design and development of Halokazi.

16.1 Fake Job Advertisements

Unauthorized or fraudulent individuals may attempt to publish fake employment opportunities.

Possible control: Employer verification, vacancy moderation and reporting mechanisms.

16.2 Fake Employer Accounts

Users may attempt to impersonate legitimate companies or organizations.

Possible control: Employer verification and administrative approval where appropriate.

16.3 Spam Applications

Candidates may submit large numbers of irrelevant applications.

Possible control: Application controls, validation, monitoring and possible future rate-limiting mechanisms.

16.4 Data Breaches

Unauthorized access to the platform could expose personal information, professional profiles or CV documents.

Possible control: Secure authentication, authorization, encryption where appropriate, access controls and security testing.

16.5 Malicious File Uploads

Uploaded documents may introduce security risks if file validation is inadequate.

Possible control: File-type validation, size restrictions, secure storage and appropriate file-security mechanisms.

16.6 Notification Failure

Email, SMS or other supported notification services may experience delays or temporary failures.

Possible control: Logging, retry mechanisms and notification-status monitoring where applicable.

16.7 System Downtime

Hosting, server, database or network failures may temporarily prevent access to the platform.

Possible control: Reliable hosting, monitoring, backup procedures and recovery planning.

16.8 Poor User Adoption

A complicated interface or difficult user experience may discourage job seekers and employers from using the system.

Possible control: User-centered design, usability testing and responsive interface design.

16.9 Inaccurate User Information

Candidates or employers may submit inaccurate or outdated information.

Possible control: Validation mechanisms, verification where applicable and clearly assigned responsibility for maintaining accurate information.

These risks will be analyzed in greater detail during requirements analysis, system architecture, security design and implementation.

17. PROJECT SUCCESS CRITERIA

The initial version of Halokazi will be considered successful when the following conditions are achieved:

1. Job seekers, employers and administrators can securely register or access the system according to their assigned roles.
2. Job seekers can create and maintain professional career profiles.
3. Job seekers can create, edit, preview and download professional CVs using the available templates.
4. Authorized employers can create, edit, publish and close job vacancies.
5. Job seekers can successfully search and filter available vacancies.
6. Candidates can view complete vacancy information before submitting applications.
7. Job seekers can successfully submit job applications using the platform.
8. Candidates can access their application history and monitor application status.
9. Employers can receive, review and manage applicants.
10. Employers can update application statuses where appropriate.
11. Users can configure job preferences and alerts.
12. Relevant notifications can be generated and delivered through supported channels.
13. Administrators can manage the major platform resources and monitor system activities.
14. The platform operates correctly on supported desktop, tablet and mobile web browsers.
15. Critical functionality passes the required functional, integration, usability and security testing.
16. The system can be deployed successfully in the intended production environment.

18. EXPECTED PROJECT DELIVERABLES

Project deliverables will be divided into **software deliverables** and **documentation deliverables**.

18.1 Software Deliverables

The project is expected to produce:

1. Fully functional Halokazi responsive web application.
2. Candidate portal.
3. Employer and recruiter portal.
4. Administration portal.
5. Halokazi backend application and APIs.
6. Production-ready database.
7. CV-generation and template functionality integrated into the candidate portal.
8. Job and recruitment-management functionality integrated into the platform.
9. Job-alert and notification functionality.
10. Basic reporting and analytics functionality.

18.2 Documentation Deliverables

The project is expected to produce:

1. Project Initiation Document.
2. Software Requirements Specification (SRS)
3. Business and System Analysis Documentation.
4. System Design Documentation.
5. System Architecture Documentation.
6. Database Design Documentation.
7. API Documentation.
8. User Interface and User Experience Design Documentation.
9. Test Plan.
10. Test Cases and Test Report.
11. User Documentation.
12. Administrator Documentation.
13. Deployment and Configuration Documentation.

14. Final Project Report.

19. FUTURE EXPANSION

The Halokazi architecture should allow the platform to evolve beyond the initial release. Potential future capabilities may include:

- AI-assisted CV analysis
- CV scoring and recommendations
- CV-to-job compatibility scoring
- Automated candidate-job matching
- Candidate skill assessments
- Technical examinations
- Psychometric assessments
- Interview scheduling
- Video interviews
- AI-assisted candidate screening
- Employer subscription packages
- Premium CV services
- Native Android application
- Native iOS application
- Integration with external recruitment platforms
- Advanced recruitment analytics
- Candidate recommendations for employers
- Career-development recommendations

These capabilities would allow Halokazi to gradually evolve from a CV-building and job-search platform into a broader digital career and recruitment ecosystem.

20. PROJECT INITIATION CONCLUSION

Halokazi is proposed as an integrated web-based career and recruitment platform designed to address the fragmentation that currently exists between professional-profile preparation, CV creation, job discovery, job applications and recruitment management.

The platform will provide job seekers with a centralized environment for maintaining professional information, creating CVs, discovering employment opportunities, applying for jobs and monitoring their applications.

Employers and recruiters will be provided with tools for maintaining organizational profiles, publishing vacancies, reviewing applicants and managing recruitment activities.
System administrators will manage and monitor the platform through a dedicated administration environment.
This Project Initiation and Idea Definition document establishes the initial direction, purpose, scope, stakeholders, assumptions, constraints, risks, expected benefits and boundaries of the Halokazi project.

It also provides the foundation for the subsequent stages of the Hybrid Software Development Life Cycle.

21. DOCUMENT APPROVAL AND SIGN-OFF

By signing below, you acknowledge that you have reviewed the Project Initiation and Idea Definition document and agree that it provides an appropriate high-level foundation for the Halokazi project.
